

Thank you for purchasing the Weatherizer Action Pack for Adobe Photoshop! This guide will give you basic instructions on how to install and use the actions.

## List of Contents

1. Included Files
2. Installing the actions
3. Using the actions

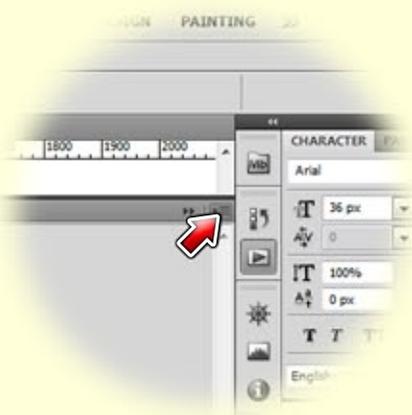

### 1. Included Files

- Weatherizer.atn
- Instructions.pdf
- Tree.psd

### 2. Installing the actions

These are brief instructions on how to install actions in Adobe Photoshop. For a more detailed explanation on Photoshop Actions, you should visit Adobe's website or view the documentation you got with Photoshop.

- 1** - Open up Photoshop and open the Actions window by going to "Window" located in the top menu and select "Actions" from the dropdown menu. Alternatively you can press Alt/Cmd + F9
- 2** - Locate the icon in the screenshot below and click on it to bring up another drop down menu

- 3** - Select "load Actions" and then open the file called "Weatherizer.atn" (it will be in the same folder as this PDF document).

### 3. Using the actions

After loading the actions, you will see a new folder in the Actions window named "Weatherizer". Open the folder by clicking on the arrow as shown below.

You will now see a list of all available actions to use. Here is an overview of the actions and how they will work best.

**Summer to Autumn** - Works best on images with a lot of green tones.

**Summer to Winter** - Works best on images with green landscape and blue skies.

**Summer to Winter Alternate Method** - If the first method doesn't look right, try this one. It uses different techniques. It works best on images with a lot more green in them.

**Summer to Winter with Snow** - Same as the above actions but with an added realistic snow effect!

**Summer to Night/Silhouette** - Works best on green landscapes with a blue sky. It gives a simple night time effect.

**Autumn to Winter** - This action is used on images with a lot of brown and yellow tones found in autumn pictures and gives a similar result to the above Summer to Winter actions.

**Rain** - This action will take any image and render a realistic rain effect!

Playing the actions is really easy! Simply select the action you wish to use, make sure the layer you want to apply the effect to is highlighted, and then press play!
