

## Important note about editing this template:

This template features LESS and AJAX technologies to change color schemes easily as well as to power portfolio views. This feature requires you to **upload the edited website to a web server (or) local host in order to work properly.**

If you simply open the static HTML files on a browser and test the preview then everything may not work as expected. So please upload and edit the HTML files from a local host / web server and check your edited website preview from that server.

We have tested this template and it is working properly. Anyway if you still find bugs please contact us via our support system website:

<http://designova.net/support.html>

If you like our work kindly rate our product on themeforest:
